Free voltage & Free frequency

By applying SMPS, it can show a steady chart brightness that is not almost affected by the changes of AC voltage input.

Body channel is operated by remote control

Body channel was operated on the previous product through the switch of the body. But body channel can be easily operated on the new product only by the remote control.

Clear & various charts

It shows clear 42 charts, including eyesight, astigmatic angle, binocular vision, heterophoria, stereopsis and so on, and the mask(vertical, horizontal, single).

Rapid chart change speed

We can provide rapid and comfortable optometry service to the customers with the chart change speed of the industry top level.

Refined & outstanding design

The refined appearance, which shows LED lighting at the side of the product, will upgrade the optometry room.

PACP-7000L

High luminance LED can provide a clearer chart than halogen lamp and reduces the maintenance effort.
